

Jayesh Chawla

Senior Frontend Engineer · React & Next.js · 7+ Years

hi@jayeshchawla.dev | github.com/techexpertjc | linkedin.com/in/jayeshchawlajc | India (Remote)

SUMMARY

Frontend engineer with 7+ years building production React interfaces, with a track record of translating Figma designs into pixel-perfect, maintainable UI and owning frontend codebases end to end. Deep experience across React, TypeScript, and modern component architecture (Material UI, Emotion), including two full ground-up rebuilds of a product's frontend through complete design overhauls. Comfortable working directly with distributed European teams and communicating async.

EXPERIENCE

Frontend Engineer → DevOps Engineer · Predixions Inc *Dec 2023 — Present*

- Built and maintained the React/TypeScript frontend for the core product before expanding into infrastructure ownership.
- Took the application through SOC 2 compliance, adding frontend-side security and process rigor.
- Later led a full cloud migration (GCP → Azure) across all applications and infrastructure — a breadth of ownership most frontend specialists don't get exposure to.

React · TypeScript · Azure · Google Cloud · SOC 2 · CI/CD

Frontend Engineer · Patricia AI *Jun 2021 — Nov 2023*

- Translated Figma designs into pixel-perfect React interfaces across 2.5 years of continuous frontend development.
- Built the product's frontend from the ground up twice, across two full brand and design overhauls — direct experience owning large-scale UI rewrites.
- Integrated the frontend with a Unity WebGL build, handing users off into a 3D navigable environment, and integrated REST APIs and Stripe across the application surface.
- Reviewed pull requests and onboarded new joiners onto the frontend codebase.

React · TypeScript · Material UI · Emotion · Unity (WebGL handoff) · Stripe

Associate Tech Consultant · Xmplify Technolabs *Aug 2020 — May 2021*

- Built a flagship geofencing feature end to end on the frontend using the Google Maps API, on a React + Spring Boot HRMS.
- Automated field-agent compensation by calculating distance travelled inside a mapped boundary — handled polygon containment, boundary transitions, and distance accumulation for figures used in real payouts.

React · Google Maps API · JavaScript

Associate Tech Consultant · Streebo Soft Solutions Pvt Ltd *Jun 2019 — Jul 2020*

- Built and supported a front-facing production application for an insurance provider — website, iOS, and Android delivered from a single hybrid codebase.
- Owned the application in production, not just in development, and provided L3 technical support.

IBM MobileFirst 7 · JavaScript · Cordova · Hybrid iOS/Android

SELECTED FREELANCE PROJECTS

Freelance Full-Stack Engineer · Hiike

- Developed entire features end to end — from the user-facing interface through the data and auth behind it — as the sole engineer responsible for the work.

Freelance Engineer · Timee

- Backend and real-time work for a Flutter client — Firebase Cloud Functions plus Node services for WebRTC video built on LiveKit.

Firebase Cloud Functions · Node.js · LiveKit · WebRTC · Flutter

SKILLS

Frontend: React · Next.js · TypeScript · JavaScript · Material UI · Emotion · Google Maps API

Full-stack & mobile: Node.js · REST APIs · Flutter · Firebase · Stripe · WebRTC / LiveKit

Infrastructure (breadth): Azure · Google Cloud · CI/CD · SOC 2
